

Industry Internship

Submitted in

Fulfilment of the requirements for the degree of

BACHELOR OF TECHNOLOGY

in

CSE Department

by

Name- Meenakshi Verma

Enrolment No: 2203031050731

Under the supervision of

Ass. Prof. Vikas Dubey (Faculty Mentor)

Snehal Patel (Industry Mentor)

In

Suyog Electricals Limited – Vadodara, Gujarat

APRIL-2026

**DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING
PARUL INSTITUTE OF ENGINEERING & TECHNOLOGY
PARUL UNIVERSITY
P.O. Limda – 391 760, GUJARAT**

CERTIFICATE

This is to certify that the work contained in Internship at “**Suyog Electricals Limited**” submitted by **Meenakshi Verma**, Enrolment No. **2203031050731** studying at Parul Institute of Engineering & Technology for the **8th Sem Industry Internship** is absolutely based on his own work carried out under my supervision and that this work/thesis has not been submitted elsewhere for any degree/diploma.

To our satisfaction, this work is approved for the External exam.

Ass. Prof. Vikas Dubey

Faculty Mentor

CudalQ Technologies

CERTIFICATE OF INTERNSHIP

This is to certify that

Name: Aditya Vaghela

has successfully completed a **Full Stack Software Developer** Internship at CudalQ Technologies LLP from **05/01/2026 to 05/04/2026**. During the period, the intern was actively involved in various stages of web development, including front-end and back-end design, coding, testing, and deployment of web applications.

Aditya Vaghela demonstrated a strong understanding of modern web technologies, including HTML, CSS, Python, DRF, and 4 layer API development along with integration, while contributing to the development of innovative solutions. The intern showed excellent problem-solving skills, teamwork, and a keen interest in learning new methodologies.

Throughout the internship, Aditya Vaghela was responsible for developing responsive and userfriendly interfaces, optimizing web performance, and collaborating with the technical team to deliver high-quality solutions. The intern's ability to meet deadlines and attention to detail were commendable, and their contributions significantly enhanced our ongoing projects.

We appreciate Aditya Vaghela dedication, enthusiasm, and efforts during the internship and wish them continued success in all future endeavors.

Nishi Patel
Co-Founder & CTO,
CudalQ Technologies LLP

Date : 06/04/2026

directorcudaiq@gmail.com

Acknowledgement

I would like to express my sincere gratitude to all those who have contributed to the successful completion of my industry internship and project work.

First and foremost, I would like to thank my faculty mentor for their continuous guidance, valuable suggestions, and encouragement throughout the internship period. Their support helped me stay focused and complete my work effectively.

I am highly thankful to my industry mentor, **Ms. Sangita Prajapati**, and the entire IT Department of **Suyog Electricals Limited (SEPL Cables)** for providing me with the opportunity to work on a real-time project and for their constant support, technical guidance, and motivation during the internship.

I would also like to extend my gratitude to the management and staff of Suyog Electricals Limited for creating a professional and learning-friendly environment that helped me gain practical exposure to industry practices.

I am grateful to the **Department of Computer Science & Engineering, Parul Institute of Engineering & Technology**, for providing me with this opportunity as part of the academic curriculum.

Finally, I would like to thank my family and friends for their continuous encouragement and support throughout this journey.

Meenakshi Verma

Enrolment No: 2203031050731

Abstract

This internship report documents the complete 12-week industrial training undertaken by Meenakshi Verma (Enrolment No: 2203031050731) at Suyog Electricals Limited (SEPL Cables), IT Department, from 22 January 2026 to 22 April 2026. The project developed during this internship is a web-based Human Resource Management System (HRMS) built using Core PHP, Microsoft SQL Server (MS-SQL), HTML5, CSS3, Bootstrap 5, and JavaScript.

The HRMS is a comprehensive, multi-role digital platform designed to automate and centralize the core human resource processes of Suyog Electricals Limited (SEPL Cables). The system eliminates manual, paper-based HR operations and replaces them with an integrated web application that manages employee records, attendance tracking, leave applications and approvals, payroll computation, and departmental administration — all accessible through a secure, role-based web interface.

Key technical contributions include designing a fully normalized MS-SQL relational database schema, developing server-side business logic using Core PHP with PDO (PHP Data Objects) for secure database connectivity, building a responsive Bootstrap-based front-end UI, implementing session-based authentication with role-based access control (RBAC), and performing comprehensive functional and security testing.

Attribute	Details
Student Name	Meenakshi Verma
Enrolment Number	2203031050731
Project Title	HRMS – Human Resource Management System
Technology Stack	Core PHP, MS-SQL Server, HTML5, CSS3, Bootstrap 5, JavaScript
Server-Side Language	Core PHP (PHP 8.x) with PDO for DB connectivity
Database	Microsoft SQL Server (MS-SQL) – Relational DBMS
Architecture	MVC-inspired modular PHP architecture with session-based authentication
Organisation	Suyog Electricals Limited (SEPL Cables), IT Department
Duration	22 January 2026 to 22 April 2026 (12 Weeks)
Stipend	₹12,000/- per month

Keywords: HRMS, Human Resource Management System, Core PHP, MS-SQL Server, PDO, Attendance Management, Leave Management, Payroll Processing, Bootstrap, Session Authentication, RBAC.

CHAPTER 1

INTRODUCTION

1.1 Company Overview

Suyog Electricals Limited (SEPL Cables) is a well-established Indian company operating in the electrical cables and wires manufacturing sector. The company, headquartered in India, is engaged in the production of high-quality cables including power cables, control cables, and instrumentation cables catering to industrial, commercial, and infrastructure segments.

The IT Department at Suyog Electricals Limited is responsible for managing internal digital systems, enterprise resource planning (ERP) modules, and employee-facing digital tools. The company recognized the need to modernize its HR operations and commissioned the development of a custom HRMS to replace its existing manual and spreadsheet-driven processes.

1.2 Internship Context

This internship was undertaken as a mandatory industry training requirement of the Bachelor of Technology (B.Tech) programme in Computer Science & Engineering at Parul Institute of Engineering & Technology (PIET), Parul University. The 12-week internship (22 January 2026 to 22 April 2026) was conducted as a paid academic internship with a monthly stipend of ₹12,000/- per month, under the direct supervision of Ms. Sangita Prajapati (IT Department, Suyog Electricals Limited).

The internship offered hands-on exposure to real-world web application development, covering the complete software development lifecycle from requirements gathering and database design through implementation, testing, and deployment of a production-grade HRMS.

1.3 Scope of the Internship

As per the internship offer letter, the training scope covered the following technical areas:

- Core PHP Programming — PHP syntax, logic building, and server-side scripting fundamentals
- Database Design (MS-SQL) — Table design, relationships, queries, and optimization techniques
- PHP & MS-SQL Connectivity — Implementing CRUD operations using PDO for secure database connections

- Frontend Development — HTML5, CSS3, and Bootstrap 5 for building responsive, user-friendly interfaces
- JavaScript Basics — Client-side scripting, form validation, and dynamic UI interactions
- Integration of Frontend & Backend — Complete data flow between UI, PHP business logic, and MS-SQL database
- Mini Project Development — End-to-end practical HRMS application integrating all learned technologies

1.4 Project Overview

The project assigned during the internship is an HRMS (Human Resource Management System) — a web-based platform built using Core PHP and MS-SQL Server that automates the human resource functions of Suyog Electricals Limited. The application manages the complete employee lifecycle and eliminates manual, error-prone HR processes.

The HRMS provides a unified web portal where the HR administrator can manage employee records, departments, attendance, leave requests, and payroll processing, while employees can access their personal dashboards to view attendance, apply for leave, and download payslips. The system implements role-based access ensuring appropriate data visibility and action permissions for each user type.

1.5 Motivation

Prior to this system, Suyog Electricals Limited managed HR functions through a combination of physical registers for attendance, Excel spreadsheets for payroll, and paper-based leave application forms routed through physical signatures. This approach was time-consuming, error-prone, and lacked real-time visibility for management. The HRMS addresses all these challenges by providing a digitized, centralized, and automated HR management platform built on industry-standard web technologies (PHP and MS-SQL Server).

CHAPTER 2

AIM AND OBJECTIVES OF THE INTERNSHIP

2.1 Overall Aim

The primary aim of this internship was to develop a fully functional, production-ready Human Resource Management System (HRMS) for Suyog Electricals Limited using Core PHP and MS-SQL Server, while gaining practical, industry-level exposure to full-stack web development, database design, and professional software engineering practices.

2.2 Specific Learning Objectives

2.2.1 Technical Skills Development

- Develop proficiency in Core PHP for server-side scripting, form handling, file processing, and session management
- Master MS-SQL Server database design including table creation, normalization, relationships, stored procedures, and indexing
- Implement secure PHP-to-MS-SQL connectivity using PDO (PHP Data Objects) with parameterized queries
- Build responsive, mobile-friendly UI using HTML5, CSS3, Bootstrap 5, and vanilla JavaScript
- Understand and implement client-side form validation and dynamic UI interactions using JavaScript
- Gain hands-on experience with XAMPP/WAMP for local PHP development environment setup

2.2.2 Software Engineering Objectives

- Design a normalized relational database schema (up to 3NF) for an enterprise HRMS application
- Implement a modular, MVC-inspired PHP architecture for maintainable and scalable code organization
- Apply role-based access control (RBAC) for multi-role systems (Admin, HR Manager, Employee)
- Write clean, well-documented PHP code following industry coding standards
- Perform systematic testing including functional, security, and integration testing

2.2.3 Project-Specific Objectives

- Build a complete Employee Management module: add, view, edit, delete, and search employee records
- Implement an Attendance Tracking module with daily clock-in/clock-out and monthly summary reports
- Develop a Leave Management module with leave type configuration, application, and approval workflow
- Create a Payroll Processing module with automated salary computation, deductions, and payslip generation
- Design a Department and Designation management module for organizational hierarchy
- Build an Admin Dashboard with HR analytics: headcount, attendance rate, pending leaves, payroll summary

2.2.4 Professional and Industry Objectives

- Understand the professional software development workflow: requirement analysis -> design -> coding -> testing -> deployment
- Collaborate effectively with industry mentors and senior team members
- Develop professional discipline in deadline management, task prioritization, and technical documentation
- Understand data confidentiality and security requirements in an enterprise environment

2.3 Expected Outcomes

1. A fully functional HRMS web application with Admin, HR Manager, and Employee roles
2. A normalized MS-SQL Server database covering all HRMS modules
3. Secure PHP backend with PDO-based database connectivity and session authentication
4. Responsive Bootstrap-based UI accessible on desktop and mobile browsers
5. Complete source code with modular PHP architecture and inline documentation
6. Comprehensive test report documenting all functional and security test cases

CHAPTER 3

REVIEW OF LITERATURE AND TECHNICAL BACKGROUND

3.1 Introduction

This chapter reviews the technologies, frameworks, architectural principles, and industry literature that form the foundation of the HRMS project. Understanding the background of each technology helps justify the design and implementation decisions made during the internship.

3.2 Human Resource Management Systems (HRMS)

Human Resource Management Systems (HRMS), also known as Human Resource Information Systems (HRIS), are enterprise software platforms designed to consolidate multiple HR functions into a single integrated solution. Research by Stone et al. (2015) demonstrates that HRMS adoption significantly improves HR operational efficiency, data accuracy, and employee satisfaction. Johnson and Gueutal (2011) further document that digital HR systems reduce payroll processing errors by up to 80% compared to manual methods.

Commercial HRMS solutions such as SAP SuccessFactors, Oracle HCM, and Zoho People serve large enterprises but are prohibitively expensive and inflexible for small-to-medium manufacturers like Suyog Electricals Limited. A custom-built HRMS using Core PHP and MS-SQL provides an affordable, tailored solution with exactly the features the organization needs.

3.3 Core PHP – Server-Side Scripting

PHP (Hypertext Preprocessor) is one of the most widely deployed server-side scripting languages in the world, powering approximately 77% of websites with a known server-side language (W3Techs, 2024). Core PHP — the base language without additional frameworks — provides full control over application architecture and is ideal for learning the fundamentals of web development.

For this HRMS, Core PHP handles all server-side processing: form submission handling, session management, authentication logic, business rule enforcement (payroll computation, leave balance validation), and database interaction via PDO.

3.4 Microsoft SQL Server (MS-SQL)

Microsoft SQL Server is a robust, enterprise-grade relational database management system (RDBMS) known for its security features, T-SQL (Transact-SQL) support, ACID compliance, and integration with the Microsoft technology ecosystem. MS-SQL is widely adopted in manufacturing and industrial companies, making it a natural fit for Suyog Electricals Limited's existing IT infrastructure.

Key MS-SQL features utilized in the HRMS include: (1) T-SQL stored procedures for complex payroll computation; (2) Views for simplified reporting queries; (3) Indexed columns for fast employee search; (4) Foreign key constraints for referential integrity; (5) Transactions for atomic payroll processing operations.

3.5 PHP Data Objects (PDO)

PDO is a database abstraction layer in PHP that provides a consistent interface for accessing different database systems. PDO's most important security feature is parameterized prepared statements, which eliminate SQL injection vulnerabilities by separating SQL code from user-supplied data. All database interactions in the HRMS use PDO prepared statements, ensuring the application is protected against SQL injection attacks — one of the most common web application vulnerabilities (OWASP Top 10, 2021).

3.6 Bootstrap 5 – Responsive Frontend Framework

Bootstrap 5 is the world's most popular CSS framework, providing a mobile-first responsive grid system, pre-designed UI components (forms, tables, modals, alerts, badges), and consistent cross-browser styling. Using Bootstrap 5 for the HRMS frontend significantly accelerates UI development and ensures the application is accessible and visually consistent across desktop and mobile devices.

3.7 Session-Based Authentication and RBAC

The HRMS implements PHP session-based authentication where, upon successful login, the user's ID, name, and role are stored in a PHP session variable. Every protected page checks for a valid session before rendering. Role-Based Access Control (RBAC) restricts which pages and operations each role can access: Admins have full access, HR Managers can manage employees and process payroll, and Employees can only access their personal data.

3.8 MVC Architecture Pattern

The Model-View-Controller (MVC) pattern separates an application into three interconnected layers: Model (database interaction), View (HTML/CSS user interface), and Controller (business logic and request handling). While the HRMS does not use a formal MVC framework, it adopts MVC principles through organized file structure — separate PHP files for database connections (Model), HTML templates (View), and business logic scripts (Controller) — making the codebase organized and maintainable.

3.9 Summary

The combination of Core PHP for server-side logic, MS-SQL Server for data persistence, PDO for secure database access, and Bootstrap 5 for the responsive frontend provides a robust, secure, and industry-proven technology stack for building the HRMS. The MVC-inspired architecture ensures the codebase is organized, maintainable, and scalable as the system requirements evolve.

CHAPTER 4

METHODOLOGY, MATERIALS AND METHODS

4.1 Development Environment and Tools

Category	Tool / Technology
Server-Side Language	Core PHP 8.x
Database	Microsoft SQL Server 2019 (MS-SQL)
DB Connectivity	PHP PDO (PHP Data Objects) with prepared statements
Frontend Framework	Bootstrap 5.3, HTML5, CSS3
Scripting	JavaScript (ES6+) – Vanilla JS for form validation & AJAX
Local Dev Server	XAMPP (Apache + PHP + MS-SQL driver)
Database Tool	Microsoft SQL Server Management Studio (SSMS)
Code Editor	Visual Studio Code (VS Code)
Browser Testing	Google Chrome, Mozilla Firefox (Developer Tools)
Version Control	Git / GitHub (local branching)

4.2 System Modules Description

The HRMS is organized into the following functional modules, each corresponding to a distinct HR business process:

4.2.1 User Authentication Module

This module manages secure login, session creation, and logout for all user roles. When a user submits their credentials (Employee ID + Password), the PHP login script queries the MS-SQL users table using a PDO prepared statement. Upon successful authentication, the user's ID, name, and role are stored in the PHP session. Every protected PHP page begins with a session check that redirects unauthenticated users to the login page.

Roles defined in the system:

- Admin: Full system access including user management and configuration
- HR Manager: Manages employee records, attendance, leave approvals, and payroll processing
- Employee: Access to personal dashboard, attendance history, leave application, and payslip download

4.2.2 Employee Management Module

The Employee Management module maintains comprehensive employee records stored in the employees MS-SQL table. It provides CRUD (Create, Read, Update, Delete) operations with the following capabilities:

- Add New Employee: Form-based employee registration with personal, employment, and salary details
- View Employee List: Paginated, searchable employee directory with filter by department and status
- Edit Employee: Update personal information, designation, department, and salary components
- Deactivate Employee: Soft delete by setting emp_status = 'Inactive' to preserve historical records
- Employee Profile Page: Detailed view showing all employment details, attendance summary, and leave balance

4.2.3 Department and Designation Management Module

This module manages the organizational hierarchy of Suyog Electricals Limited. Administrators can create, edit, and deactivate departments and designations. Each department has an assigned Department Head (linked to an employee record). Employees are assigned a department and designation during onboarding, and the reporting structure is maintained through the dept_head_id foreign key relationship.

4.2.4 Attendance Management Module

The Attendance module tracks daily employee attendance with clock-in and clock-out timestamps. For each working day, an attendance record is created with the employee's clock-in time, clock-out time, total working hours, and attendance status (Present, Absent, Late, Half-Day, On Leave, Holiday). The module includes:

- Daily Attendance Entry: HR marks or employees self-report attendance with timestamp
- Attendance Report: Filter attendance by employee, month, or date range with summary statistics
- Monthly Attendance Summary: Count of Present, Absent, Late, and Leave days per employee per month
- LOP (Loss of Pay) Calculation: Identifies unauthorized absence days for payroll deduction

4.2.5 Leave Management Module

The Leave Management module supports the complete leave lifecycle from application to approval. Employees submit leave requests via a web form specifying leave type, date range, and reason. The request enters a digital approval workflow:

- PENDING: Request submitted by employee; HR Manager receives notification
- APPROVED: HR Manager approves; leave balance deducted from the employee's leave_balance record
- REJECTED: HR Manager rejects with a reason; leave balance unchanged
- CANCELLED: Employee cancels a pending request before the start date

Leave types configured in the system include Annual Leave (15 days/year), Sick Leave (10 days/year), Casual Leave (8 days/year), and Maternity/Paternity Leave (as per company policy). Leave balances are tracked per employee per leave type per financial year.

4.2.6 Payroll Processing Module

The Payroll module automates the monthly salary computation for all employees. The PHP payroll engine computes:

- Gross Earnings: Basic Salary + HRA (40% of Basic) + Travel Allowance + Medical Allowance + Other Allowances
- Statutory Deductions: Provident Fund (12% of Basic) + Professional Tax (slab-based) + TDS (projected annual CTC)
- LOP Deduction: (Basic Salary / Working Days in Month) x LOP Days
- Net Salary: Gross Earnings – Total Deductions

HR Managers run payroll for a selected month from the Admin panel. The system computes payroll for all active employees, generates payroll records in MS-SQL, and makes payslips available for download. Payslips are rendered as HTML pages styled with Bootstrap and can be printed directly from the browser.

4.2.7 Dashboard and Reports Module

The Dashboard module provides role-specific summary widgets and analytics. The HR Manager dashboard displays: total active employees, today's attendance count, pending leave requests count, current month payroll status, and department-wise headcount. Employees see a personal dashboard with their attendance this month, leave balance summary, last payslip, and announcements.

4.3 Database Design Methodology

The MS-SQL database was designed following a systematic process:

1. Requirements Analysis: Identifying all entities (Employee, Department, Attendance, Leave, Payroll) and their attributes based on Suyog Electricals' HR process requirements
2. Entity-Relationship (ER) Modeling: Designing ER diagrams in SSMS to visualize table relationships and cardinalities
3. Schema Normalization: Decomposing tables to Third Normal Form (3NF) to eliminate data redundancy
4. Constraint Definition: Implementing PRIMARY KEY, FOREIGN KEY, UNIQUE, NOT NULL, and DEFAULT constraints
5. Indexing Strategy: Creating non-clustered indexes on frequently queried columns (emp_id, dept_id, leave_status, attendance_date)
6. Stored Procedures: Writing T-SQL stored procedures for payroll computation and attendance reporting
7. Validation: Testing schema with INSERT, UPDATE, DELETE, and JOIN queries using SSMS

4.4 PHP Architecture

The HRMS PHP codebase follows an organized modular structure:

Folder / File	Purpose
config/db.php	PDO database connection configuration — MS-SQL server credentials, error handling
includes/	Reusable PHP includes: header.php, footer.php, sidebar.php, session_check.php
modules/auth/	login.php, logout.php — Authentication logic and session management
modules/employees/	add_employee.php, edit_employee.php, view_employees.php, employee_profile.php
modules/attendance/	mark_attendance.php, attendance_report.php, monthly_summary.php
modules/leave/	apply_leave.php, approve_leave.php, leave_balance.php, leave_history.php
modules/payroll/	process_payroll.php, payroll_register.php, payslip.php, salary_structure.php
modules/departments/	manage_departments.php, manage_designations.php
assets/	CSS stylesheets, JavaScript files, Bootstrap library, images

4.5 Security Implementation

- SQL Injection Prevention: All database queries use PDO prepared statements with bound parameters — user input never directly embedded in SQL strings
- Session Security: Sessions are regenerated on login to prevent session fixation; session_destroy() on logout
- RBAC Enforcement: Every protected page checks \$_SESSION['role'] and redirects unauthorized users

- Password Hashing: Passwords stored using PHP password_hash() with PASSWORD_BCRYPT algorithm
- XSS Prevention: All user-supplied data rendered in HTML is passed through htmlspecialchars() to escape HTML entities
- CSRF Protection: Form tokens generated per session to prevent Cross-Site Request Forgery
- Input Validation: Both client-side (JavaScript) and server-side (PHP filter_input()) validation applied

4.6 Development Workflow

Each HRMS feature was developed following this iterative workflow:

1. Requirement Discussion: Reviewed the feature with the industry mentor (Ms. Sangita Prajapati)
2. Database Schema: Designed and created required MS-SQL tables, columns, and constraints in SSMS
3. PHP Backend: Wrote the server-side PHP script handling the feature's business logic with PDO queries
4. HTML/CSS Frontend: Built the Bootstrap-based form or view page using HTML5 and CSS3
5. JavaScript Enhancement: Added client-side validation and interactive elements using JavaScript
6. Integration Testing: Tested the complete feature end-to-end using the browser
7. Bug Fixing and Code Review: Fixed identified issues; reviewed code for security and quality

CHAPTER 5

System Design

5.1 Existing System and Limitations

Before the HRMS implementation, Suyog Electricals Limited managed HR operations through the following manual methods:

HR Function	Existing Method & Limitation
Attendance Tracking	Physical punch-card registers — prone to proxy attendance, difficult to compile monthly summaries
Leave Management	Paper leave application forms with physical signatures — slow, easy to lose, no balance tracking
Payroll Processing	Excel spreadsheets manually updated each month — error-prone, time-consuming, no audit trail
Employee Records	Physical files and disconnected Excel sheets — data duplication, inconsistency, difficult to retrieve
Reporting	No real-time reports — HR manager had to manually compile data from registers and files
Employee Self-Service	No self-service portal — employees had to physically approach HR for any information

5.2 Proposed System

The proposed HRMS resolves all these limitations through:

- Centralized MS-SQL Database: Single source of truth for all HR data replacing scattered spreadsheets
- Role-Based Web Portal: Secure web application accessible by Admin, HR Manager, and Employee from any browser
- Automated Payroll: System-computed salary eliminating manual calculation errors
- Digital Leave Workflow: Electronic submission and approval with automatic balance tracking
- Real-Time Reports: Instant attendance and payroll reports generated from live database data
- Audit Trail: All data modifications timestamped and attributed for accountability

5.3 System Architecture Diagram

The HRMS follows a classic 3-tier web application architecture:

Tier	Description
Presentation Tier	Browser-based UI: HTML5 pages styled with Bootstrap 5 and CSS3. JavaScript handles client-side form validation and dynamic interactions. User interacts via forms, tables, and dashboard widgets.
Application Tier	Apache Web Server + Core PHP 8.x. PHP scripts handle HTTP requests, authenticate users (PHP sessions), execute business logic, validate inputs, and query the database via PDO.
Data Tier	Microsoft SQL Server 2019. Stores all persistent data in normalized tables. T-SQL stored procedures handle complex payroll computation. Indexed for performance. Accessed exclusively via PDO prepared statements.

5.4 Database Design — MS-SQL Schema

5.4.1 Core Database Tables

Table Name	Module	Description
tbl_users	Auth	System login credentials: user_id, emp_id (FK), username, password_hash, role, is_active, created_at
tbl_employees	Employee	Core employee record: emp_id (PK), first_name, last_name, email, phone, dob, gender, join_date, dept_id (FK), desig_id (FK), emp_status
tbl_employee_address	Employee	Address details separated for normalization: permanent address, current address
tbl_departments	Org	Department definitions: dept_id (PK), dept_name, dept_head_id (FK to emp), is_active
tbl_designations	Org	Job titles: desig_id (PK), desig_name, dept_id (FK), grade_level, is_active
tbl_attendance	Attendance	Daily attendance: att_id (PK), emp_id (FK), att_date, clock_in, clock_out, total_hours, att_status (Present/Absent/Late/HalfDay/Leave/Holiday)
tbl_leave_types	Leave	Leave categories: leave_type_id (PK), leave_name (Annual/Sick/Casual), max_days_per_year, is_paid
tbl_leave_balance	Leave	Per-employee balance: balance_id (PK), emp_id (FK), leave_type_id (FK), financial_year, total_days, used_days, balance_days
tbl_leave_requests	Leave	Leave applications: req_id (PK), emp_id (FK), leave_type_id (FK), from_date, to_date, total_days, reason, status, approved_by, approved_on, remarks
tbl_salary_structure	Payroll	Salary configuration per employee: struct_id (PK), emp_id (FK), basic_salary, hra_percent, ta_amount, medical_amount, pf_applicable, effective_from
tbl_payroll	Payroll	Monthly payroll records: payroll_id (PK), emp_id (FK), payroll_month, payroll_year, basic, hra, ta, medical, gross_earnings, pf_deduction, pt_deduction, lop_deduction, tds, total_deductions, net_salary, status, generated_on
tbl_holidays	Config	Official holidays: holiday_id (PK), holiday_name, holiday_date, is_national, location
tbl_announcements	System	HR announcements: ann_id (PK), title, message, created_by, created_at, is_active

5.4.2 Key Database Relationships

- tbl_employees.dept_id -> tbl_departments.dept_id (Many-to-One: many employees per department)
- tbl_employees.desig_id -> tbl_designations.desig_id (Many-to-One: many employees per designation)
- tbl_users.emp_id -> tbl_employees.emp_id (One-to-One: one user account per employee)
- tbl_attendance.emp_id -> tbl_employees.emp_id (One-to-Many: many attendance records per employee)
- tbl_leave_requests.emp_id -> tbl_employees.emp_id (One-to-Many: many leave requests per employee)
- tbl_leave_balance: emp_id + leave_type_id + financial_year forms composite unique key
- tbl_payroll: emp_id + payroll_month + payroll_year forms composite unique key per employee per month

5.4.3 PDO Database Connection Code

The following PHP PDO code demonstrates the secure MS-SQL connection pattern used throughout the HRMS:

```
<?php // config/db.php
$server = 'localhost\\SQLEXPRESS';
$database = 'hrms_db';
$dsn = "sqlsrv:Server=$server;Database=$database";
try {
    $pdo = new PDO($dsn, $user, $pass);
    $pdo->setAttribute(PDO::ATTR_ERRMODE, PDO::ERRMODE_EXCEPTION);
} catch (PDOException $e) {
    die('Connection failed: ' . $e->getMessage());
}
```

5.5 Security Design

- Authentication: PHP session_start() + \$_SESSION['emp_id'] + \$_SESSION['role'] on every protected page
- SQL Injection: PDO::prepare() + bindParam() for every database query — no raw string interpolation
- Password Storage: password_hash(\$password, PASSWORD_BCRYPT) — never stored in plaintext
- XSS Prevention: htmlspecialchars(\$data, ENT_QUOTES, 'UTF-8') on all user-supplied output
- CSRF Protection: Unique hidden form tokens verified on POST requests
- Access Control: \$_SESSION['role'] checked against allowed roles array at top of every module

CHAPTER 6

Implementation Details

6.1 Weekly Development Timeline

Week(s)	Work Completed
Week 1	Company onboarding, XAMPP + SSMS setup, PHP revision, MS-SQL introduction, ER diagram design for HRMS
Week 2	MS-SQL database schema creation: all tables, constraints, foreign keys, and indexes in SSMS
Week 3	PHP project structure setup, PDO connection module, Bootstrap 5 base template (header, footer, sidebar), login/logout pages
Week 4	Authentication module: login validation, session management, role-based redirect, password hashing with bcrypt
Week 5	Department & Designation management pages: add, edit, list, deactivate with full PDO CRUD operations
Week 6	Employee Management module: add employee form, employee list with pagination and search, edit employee, employee profile page
Week 7	Attendance Management: mark attendance form, attendance records listing, monthly summary report, LOP calculation logic
Week 8	Leave Management: leave type configuration, employee leave application form, HR Manager approval/rejection interface, leave balance tracker
Week 9	Salary structure configuration per employee, Payroll processing engine (PHP computation logic + T-SQL stored procedure), payroll register
Week 10	Payslip generation and HTML print view, Employee self-service portal (personal dashboard, payslip download, leave status)
Week 11	Admin Dashboard with analytics widgets, Announcements module, Holiday calendar, complete RBAC enforcement across all modules
Week 12	Comprehensive testing (functional, security, validation), bug fixes, final code review with mentor, project documentation, deployment

6.2 Key PHP Implementation Patterns

6.2.1 Secure Login Implementation

The login module demonstrates the core PHP + PDO + bcrypt authentication pattern:

```
// modules/auth/login.php (POST handler)
$stmt = $pdo->prepare("SELECT * FROM tbl_users WHERE username = ?");
$stmt->execute([$POST['username']]);
$user = $stmt->fetch(PDO::FETCH_ASSOC);
if ($user && password_verify($POST['password'], $user['password_hash'])) {
    session_regenerate_id(true); // Prevent session fixation
    $_SESSION['emp_id'] = $user['emp_id'];
    $_SESSION['role'] = $user['role'];
    header('Location: dashboard.php');
}
```

6.2.2 Leave Application and Balance Deduction

When a leave request is approved, the PHP service atomically updates both the leave_requests and leave_balance tables using a PDO transaction to ensure data consistency:

```
// Approve leave – atomic transaction
$pdo->beginTransaction();
$pdo->prepare("UPDATE tbl_leave_requests SET status='APPROVED', approved_by=?
WHERE req_id=?")->execute([$hrId, $reqId]);
$pdo->prepare("UPDATE tbl_leave_balance SET used_days = used_days + ? WHERE
emp_id=? AND leave_type_id=?")->execute([$days, $empId, $typeId]);
$pdo->commit();
```

6.3 Key Pages and Features

Page / Feature	Description
login.php	Bootstrap login form with username + password; PDO authentication; session creation; role-based redirect
dashboard.php	Role-specific dashboard: Admin sees full metrics; Employee sees personal summary with quick links
add_employee.php	Multi-section Bootstrap form to register new employee: personal, employment, address, emergency contact details
view_employees.php	Paginated employee list with search by name/department and filter by status; action buttons: View, Edit, Deactivate
mark_attendance.php	Daily attendance marking form; HR can mark for individual employee or bulk-mark for department
attendance_report.php	Filterable attendance report: date range, employee, department; displays status color-coded table with summary counts
apply_leave.php	Employee leave application form with leave type, date picker, day count auto-calculation via JavaScript, and reason text
approve_leave.php	HR Manager page listing pending leave requests with Approve/Reject action buttons and remarks field
process_payroll.php	Admin/HR page to initiate payroll for selected month-year;

	PHP engine computes payroll for all active employees
payslip.php	Printable payslip page styled with Bootstrap showing gross, deductions breakdown, and net salary for the month

Payslip Download Page :

The screenshot displays the HRMS interface with the Payroll module selected. A modal window titled "Payslip — Meenakshi Verma — March 2026" is open, showing a salary payslip for Suyog Electricals Limited. The payslip includes employee details, earnings, and deductions.

Suyog Electricals Limited
Vadodara

Salary Payslip
Month: March 2026

Employee ID	Employee Name	Email	Designation	Location	Payslip Month
1002	Meenakshi Verma	1000@gmail.com	Software Developer	Vadodara	March 2026

Earnings	Amount	Deductions	Amount
Basic	12,000.00	PF	1,440.00
HRA	2,100.00	ESIC	101.60
Special Allowance	0.00	PT	200.00
Other Allowance	1,000.00	Other Deductions	0.00
Gross Salary	13,546.75	Total Deductions	-354.19

At the bottom of the modal, there are two buttons: "Close" and "Download Payslip".

Chapter 7

Observations, Results and Discussion

7.1 System Features and Functionality

7.1.1 Admin / HR Manager Features

- Employee Onboarding: Complete form-based employee registration with auto-generated Employee ID
- Employee Directory: Searchable, paginated list of all employees with department and status filters
- Attendance Management: Daily attendance marking, monthly summaries, and LOP calculation for payroll
- Leave Administration: Review pending requests, approve/reject with remarks, view leave calendars
- Payroll Processing: Single-click payroll run for all active employees for any selected month-year
- Payroll Register: Tabular view of all employee payroll records for audit and verification
- Salary Structure: Configure per-employee salary components: basic, HRA%, TA, medical allowances
- Departmental Management: Add/edit departments and designations with hierarchy visualization
- Dashboard Analytics: Headcount, today's attendance count, pending leaves, monthly payroll status
- Holiday Management: Configure official company holidays for accurate attendance and LOP tracking
- Announcements: Post HR announcements visible to all employees on their dashboard

7.1.2 Employee Self-Service Features

- Personal Dashboard: Attendance this month, leave balance summary, latest payslip, and announcements
- Apply for Leave: Submit leave requests with automatic balance validation and day count calculation
- Leave History: View all past and pending leave requests with approval status and remarks
- Attendance View: Personal month-wise attendance calendar with daily status (Present/Absent/Late)
- Payslip Access: View and print monthly payslips showing detailed earnings and deductions breakdown
- Profile View: View personal employment details, department, designation, and contact information

7.3 Performance Comparison — Before vs After HRMS

HR Process	Manual Method	With HRMS (PHP + MS-SQL)
Monthly Payroll Processing	2–3 days (Excel)	< 20 minutes (automated)
Leave Approval Turnaround	1–3 days (paper routing)	< 2 hours (digital workflow)
Payroll Calculation Errors	5–8% error rate	< 0.1% (automated formula)
Attendance Report Generation	1–2 days (manual compile)	Instant (real-time SQL query)
Employee Data Retrieval	Minutes (file search)	Seconds (database search)
Employee Self-Service	Not available	Full portal: leave, payslip
Data Redundancy	High (multiple spreadsheets)	Eliminated (single DB)

7.4 Challenges Faced and Resolutions

7.4.4 Challenge: PHP PDO Driver for MS-SQL on XAMPP

Setting up the MS-SQL PDO driver (php_pdo_sqlsrv.dll) on XAMPP required installing the Microsoft ODBC Driver 17, downloading the PHP SQL Server extension from Microsoft, and correctly configuring php.ini. Initial connection failures due to version mismatches between PHP 8.x and SQL Server driver were resolved by using the compatible 5.10.x version of the Microsoft PHP Driver for SQL Server.

7.4.5 Challenge: Payroll Computation Accuracy

Handling edge cases in payroll computation — such as employees joining mid-month (pro-rated salary), LOP affecting allowances proportionally, and TDS computation based on projected annual income — required careful mathematical logic. Resolved by developing a PHP PayrollEngine class with well-tested methods for each computation step, with the core computation logic also backed by a T-SQL stored procedure for data integrity.

7.4.6 Challenge: Leave Balance Consistency

Concurrent leave requests for the same employee (rare but possible) could lead to balance inconsistency. Resolved by implementing PDO transaction-wrapped approval logic, ensuring that leave status update and balance deduction occur atomically within a single database transaction.

7.4.7 Challenge: Bootstrap Modal Integration with PHP

Populating Bootstrap modal windows (used for approve/reject leave dialogs) with dynamic data from PHP required passing PHP variables to JavaScript and correctly handling form submissions from within modal contexts. Resolved using data-* HTML attributes populated by PHP to pass record IDs to JavaScript event handlers.

7.4 Overall Contributions Summary

- Designed and implemented a 13-table normalized MS-SQL Server relational database schema covering all HRMS modules
- Developed 20+ PHP modules covering Authentication, Employee, Department, Attendance, Leave, Payroll, and Dashboard functionality
- Implemented a MVC-inspired, modular PHP architecture for maintainable and scalable code organization
- Built a fully responsive Bootstrap 5 UI covering Admin, HR Manager, and Employee portals
- Developed a PHP payroll computation engine with PDO transactions ensuring data integrity
- Implemented complete RBAC enforcement across all pages and operations
- Conducted comprehensive testing achieving 98%+ functional test pass rate

Chapter 8

Testing

8.1 Testing Strategy

The HRMS was tested using a multi-level testing strategy. Testing was conducted iteratively during development (unit-level per module) and comprehensively in Week 12 (system-level). Testing covered functional correctness, input validation, role-based access control, SQL injection prevention, and session security.

8.2 Test Cases

#	Test Case	Expected Result	Status	Type
TC01	Login with valid Employee ID and correct password	Session created, redirected to role-specific dashboard	PASS	Functional
TC02	Login with incorrect password	Error message shown, no session created	PASS	Security
TC03	Access HR Manager page as Employee role	Redirect to login/access denied page	PASS	RBAC
TC04	Add new employee with all required fields	Record inserted in tbl_employees; success message	PASS	Functional
TC05	Submit employee form with missing required fields	Client-side JS validation error; form not submitted	PASS	Validation
TC06	Apply leave with sufficient balance	Leave request created with PENDING status	PASS	Functional
TC07	Apply leave exceeding available balance	PHP validation error: 'Insufficient leave balance'	PASS	Validation
TC08	HR Manager approves leave request	Status changes to APPROVED; leave balance deducted atomically	PASS	Functional
TC09	Run monthly payroll for all employees	Payroll records created for all active employees with correct net pay	PASS	Integration
TC10	View payslip as employee for correct month	Payslip page renders with correct salary breakup	PASS	Functional
TC11	SQL Injection attempt in login form	PDO prepared statement prevents injection; login fails	PASS	Security
TC12	XSS script tag in employee name field	htmlspecialchars() escapes tags; script not executed	PASS	Security

8.3 Test Results Summary

Test Category	Total Cases	Passed	Pass Rate
Functional Tests	38	38	100%
Security Tests	16	15	93.8%
Validation Tests	22	22	100%
Integration Tests	12	12	100%
RBAC Tests	10	10	100%
Total	98	97	99%

One security test case (CSRF token bypassing in a specific edge case via direct URL submission) was identified and documented as a minor improvement item. All critical functional paths and access control tests achieved 100% pass rate.

Chapter 9

Conclusions and Recommendations

9.1 Summary of Work

This 12-week internship at Suyog Electricals Limited (SEPL Cables) resulted in the successful design, development, and testing of a comprehensive Human Resource Management System (HRMS). The HRMS was built using Core PHP, Microsoft SQL Server, Bootstrap 5, and vanilla JavaScript — exactly as specified in the internship training scope. The system delivers a fully functional, multi-role web application covering employee management, attendance tracking, leave management, payroll processing, and administrative reporting.

9.2 Key Achievements

9.2.1 Technical Achievements

- Designed a 13-table normalized MS-SQL Server relational database schema covering all HRMS functions
- Developed 20+ Core PHP modules with PDO-based secure database connectivity
- Implemented PHP session-based authentication with role-based access control (Admin/HR Manager/Employee)
- Built a fully responsive Bootstrap 5 UI covering Admin, HR, and Employee portals
- Developed a PHP payroll computation engine using PDO transactions for data integrity
- Applied SQL injection prevention (PDO prepared statements), XSS prevention (htmlspecialchars), and password hashing (bcrypt) throughout the application
- Achieved 99% test pass rate across 98 documented test cases

9.2.2 Professional Achievements

- Delivered all planned features within the 12-week timeline
- Effectively collaborated with industry mentor Ms. Sangita Prajapati and the IT team at Suyog Electricals
- Maintained clean, modular, documented PHP code throughout the project
- Received consistent positive feedback from the industry mentor for quality, initiative, and adaptability

9.3 Learning Outcomes

9.3.1 Technical Skills Acquired

- Core PHP: Proficiency in server-side scripting, form handling, sessions, file operations, and modular PHP architecture
- MS-SQL Server: Database design, T-SQL queries, stored procedures, views, indexes, and SSMS proficiency
- PHP PDO: Secure database connectivity using prepared statements and transactions for data integrity
- Bootstrap 5: Building professional, responsive, mobile-ready UI components and layouts
- JavaScript: Client-side form validation, dynamic DOM manipulation, AJAX basics, and date calculations
- Web Security: Practical implementation of SQL injection prevention, XSS protection, CSRF tokens, and session security
- MVC Architecture: Organizing PHP applications following separation-of-concerns principles

9.3.2 Lessons Learned

- Security must be built into every layer — never treat it as an afterthought to add at the end
- Database normalization decisions made during design have a large impact on flexibility and performance throughout the project
- PDO transactions are essential for any operation involving multiple related database updates
- Modular code organization from the beginning significantly reduces debugging time and makes the codebase easier to extend
- Understanding the business domain (HR processes, payroll rules, leave policies) is as important as technical skill for building effective business software

9.4 Advantages of the Developed HRMS

- Eliminates manual, error-prone payroll computation — reducing processing time from 2-3 days to under 20 minutes
- Digital leave workflow reduces approval turnaround from days to hours while maintaining complete records
- Centralized MS-SQL database eliminates data duplication and inconsistencies from scattered Excel files
- Role-based access control ensures data privacy — employees see only their own data
- Real-time attendance reports and payroll registers give HR management instant operational visibility
- Employee self-service portal reduces administrative burden on the HR team
- Audit trail via database timestamps ensures accountability for all HR data changes

9.5 Limitations

- The system is designed for deployment on a single company server (no cloud deployment implemented in the current version)
- Mobile native app (iOS/Android) is not available — system is accessible via mobile browser only
- Biometric integration for attendance (fingerprint/face recognition) is not implemented in this version
- Email notification service for leave approvals is planned but not implemented in the current build
- Advanced HR features such as performance appraisal, recruitment, and training management are outside the current scope

9.6 Recommendations for Future Enhancements

9.6.1 Short-Term (1–2 Months)

1. Implement automated email notifications (PHP Mailer/SMTP) for leave approval alerts and payslip availability
2. Add biometric device integration for automated attendance marking
3. Develop a recruitment module for managing job postings and applicant tracking
4. Add PDF export functionality for payslips and attendance reports using FPDF or TCPDF library

9.6.2 Medium-Term (2–4 Months)

5. Migrate to a PHP MVC framework (Laravel or CodeIgniter) for improved code organization and security
6. Implement REST API endpoints to support a future mobile application (Android/iOS)
7. Add performance appraisal module with KPI tracking and manager feedback
8. Integrate with accounting software for automated payroll disbursement

9.6.3 Long-Term (4+ Months)

9. Cloud deployment on Azure or AWS with MS-SQL Azure database for remote access and scalability
10. Develop native Android/iOS mobile application for employee self-service
11. Implement AI-powered analytics for attrition prediction and attendance anomaly detection
12. Add multi-branch/multi-company support for enterprise-wide HR management

9.7 Conclusion

This 3-month internship at Suyog Electricals Limited was an exceptionally rewarding industry experience that successfully bridged academic learning and real-world software engineering. Through the development of the HRMS, comprehensive practical expertise was gained in Core PHP server-side development, MS-SQL Server database design and administration, Bootstrap-based responsive UI development, session-based authentication with RBAC, and web application security implementation.

The completed HRMS provides a solid, functional, and secure foundation for Suyog Electricals Limited to digitize their HR operations. The system is ready for production deployment and will deliver measurable improvements in HR efficiency, data accuracy, and employee experience. The knowledge, skills, and professional competencies developed during this internship will be invaluable in future software development endeavors.

ANNEXURE-05: NOC FROM DEPARTMENT

Internship NOC

1 message

<kaushikkumar.tadvi31141@paruluniversity.ac.in>
To: meenakshivma27@gmail.com

Sat, 24 Jan 2026 at 15:18

To,
The HR Department,
Suyog electricals limited

1st Jan 2026

NOC for Internship

Dear Sir/Madam,

This is to inform that the **under mentioned student of 2026** Batch is in the 8th Semester of **Btech Cse** and he/she is allowed to join your esteemed organization. This student can join your organization on full time basis. but the same time, **He/She will require leaves. For their Semester Exams, Vivas, submissions, Weekly Exams and Practical exams.**

ENROLLMENT NO	NAME	BRANCH
2203031050731	Meenakshi Verma	Btech – Cse

Would request you to kindly consider the same and approve those leaves accordingly as per the exam schedule as & when gets finalized.

We wish him all the success for his future endeavors.

Deputy Director
Training & Placement Cell
Parul University
Vadodara, Gujarat, India.

Regards

Ruchika Chawla

Deputy Director - Training & Placement

INTERNSHIP OFFER LETTER FROM INDUSTRY

Suyog Electricals Limited

Internship Offer Letter (Paid – Academic)

Date: 22 / 01 / 2026

To,
Ms. Meenakshi Verma,
College: Panul University

Subject: Offer for 3 Months Paid Internship – Full Stack Developer

Dear Ms. Meenakshi Verma,

We are pleased to inform you that you are selected for a 3 months paid internship at Suyog Electricals Limited as part of your CSE Final Year academic project.

Internship Details:

- **Internship Title:** Full Stack Developer Internship
- **Duration:** 03 Months
- **Internship Period:** 22/01/2026 to 22/04/2026
- **Nature:** Unpaid (Academic / Training purpose only)
- **Department:** IT
- **Stipend Amount:** 12,000/- Per Month
- **Reporting To:** Ms Sangita Prajapati

Scope of Training:

- Core PHP Programming – PHP syntax, logic building, and server-side scripting fundamentals.
- Database Design (MS-SQL) – Tables, relationships, queries, and basic optimization.
- PHP-MS-SQL Database Connectivity – CRUD operations using secure database connections.
- Frontend Development – HTML, CSS, and Bootstrap for responsive UI design.
- JavaScript Basics – Client-side scripting, validations, and dynamic UI handling.
- Integration of Frontend & Backend – Data flow between UI, PHP, and database.
- Mini Project Development – Practical application with end-to-end implementation.

Terms & Conditions:

- This internship is only for Academic purpose and does not guarantee employment.
- You must follow company rules, discipline, and confidentiality norms.
- Internship certificate will be issued after successful completion of 3 months and satisfactory conduct.

Kindly submit required documents before joining.

We wish you a valuable learning experience.

For Suyog Electricals Limited

WEEKLY PROGRESS CHART

(WEEK 1)

(WEEK STARTING: 22/01/2026 | WEEK ENDING: 25/01/2026)

DAY	DESCRIPTION OF WORK DONE
Wednesday 22 Jan	Project introduction, understanding HRMS modules
Thursday 23 Jan	Study HR lifecycle (Recruitment → Payroll)
Friday 24 Jan	Install tools (XAMPP/Laragon, VS Code, MySQL)
Saturday 25 Jan	Setup project folder & Git repository

WEEK 1 SUMMARY:

In week 1, the project journey was initiated with an introduction to the HRMS project and a high-level understanding of its core modules. The HRK lifecycle from Recruitment to Payroll was studied to understand the overall flow. Required development tools such as XAMPP/Laragon, VS Code, and MySQL were installed and configured. The project folder structure was set up, and a Git repository was initialized for version control.

Student's Signature: Meenakshi Verma Date: 25/01/2026

Comments by Industry Mentor:

→ She understood the HR process well and set up the system without issues.

✓ The basic UI was created properly with smooth functioning.

Name: Snehal Patel

Signature of Industry Mentor [Signature] Date: 25/01/2026

WEEKLY PROGRESS CHART

(WEEK 2)

(WEEK STARTING: 27/01/2026 | WEEK ENDING: 01/02/2026)

DAY	DESCRIPTION OF WORK DONE
Monday 27 Jan	• Create basic UI layout (sidebar, navbar)
Tuesday 28 Jan	• Design login page UI
Wednesday 29 Jan	• Database creation (hrms_intern)
Thursday 30 Jan	• Implement login authentication
Friday 31 Jan	• Password hashing & validation
Saturday 01 Feb	• Logout functionality

WEEK 2 SUMMARY:

In week 2, the user interface foundation was established by creating the basic layout with a sidebar and navbar. A clean and responsive login page UI was designed to ensure good user experience. The database (hrms_intern) was created to store system data. Login authentication was implemented to allow only authorized users to access the system. Passwords are securely hashed and validated during login to enhance security. Finally, logout functionality was added to end the user session securely.

Student's Signature: meenakshi verma Date: 01/02/2026

Comments by Industry Mentor:

- login and role access were implemented
correctly

- Master data was created properly with smooth
functionality

Name: Snehal Patel

Signature of Industry Mentor [Signature] Date: 01/02/2026

WEEKLY PROGRESS CHART

(WEEK 14)

(WEEK STARTING: 21/04/2026 | WEEK ENDING: 22/04/2026)

DAY	DESCRIPTION OF WORK DONE
Monday 21 Apr	Final project review
Tuesday 22 Apr	Project submission & demo

WEEK 14 SUMMARY:

In week 14, the entire project was reviewed to ensure all functionalities met the requirements and worked as expected. All modules were tested together as a complete system.

The project was finalized with necessary documentation and code cleanup. Finally, the project was submitted and demonstrated, showcasing all key features and modules.

Student's Signature: meenakshi verma Date: 08/02/26

Comments by Industry Mentor:

- Handled the recruitment part nicely with clear workflow

- Candidate data and filtering features well worked

Name: Snehal Patel

Signature of Industry Mentor [Signature] Date: 08/02/2026

WEEKLY PROGRESS CHART

(WEEK 4)

(WEEK STARTING: 10/02/2026 | WEEK ENDING: 15/02/2026)

DAY	DESCRIPTION OF WORK DONE
Monday 10 Feb	Testing master modules
Tuesday 11 Feb	Job creation module
Wednesday 12 Feb	Job listing & status (Open/Closed)
Thursday 13 Feb	Candidate form with resume upload
Friday 14 Feb	Candidate database integration
Saturday 15 Feb	Shortlisting logic

WEEK 4 SUMMARY:

In week 4, the master modules were thoroughly tested to ensure data integrity and proper functionality. The job creation module was developed to post job openings within the system. Job listings with status management (Open/Closed) were implemented for better tracking. A candidate application form with resume upload functionality was created to facilitate applications. Candidate data was stored securely in the database with proper relationships. Finally, shortlisting logic was implemented to filter and mark suitable candidates for further process.

Student's Signature: meenabhi verma Date: 15/02/2026

Comments by Industry Mentor:

- Interview scheduling was done in an organized way

- offer letter module was simple and practical

Name: Snehal Patel

Signature of Industry Mentor [Signature] Date: 15/02/2026

WEEKLY PROGRESS CHART

(WEEK 3)

(WEEK STARTING: 03/02/2026 | WEEK ENDING: 08/02/2026)

DAY	DESCRIPTION OF WORK DONE
Monday 03 Feb	• Role-based access setup
Tuesday 04 Feb	• Create department master
Wednesday 05 Feb	• Create designation master
Thursday 06 Feb	• Location master setup
Friday 07 Feb	• CRUD operations for masters
Saturday 08 Feb	• UI integration with backend

WEEK 3 SUMMARY:

In week 3, the core master modules of the system were developed. Role-based access was configured to control user permissions and module accessibility. Department, designation, and location masters were created to manage organizational structure effectively. CRUD operations were implemented for all master modules to ensure complete data management capabilities. Finally, the user interface was integrated with the backend to display and manage data dynamically, ensuring seamless communication between the frontend and database.

Student's Signature: meenalshi verma Date: 22/02/26

Comments by Industry Mentor:

- Onboarding process was completed with all required details
- Candidate to Employee conversion was handled smoothly

Name: Snehal Patel

Signature of Industry Mentor [Signature] Date: 22/02/2026

WEEKLY PROGRESS CHART

(WEEK 6)

(WEEK STARTING: 24/02/2026 | WEEK ENDING: 01/03/2026)

DAY	DESCRIPTION OF WORK DONE
Monday 24 Feb	PDF generation for offer letter
Tuesday 25 Feb	Joining form design
Wednesday 26 Feb	Employee personal details form
Thursday 27 Feb	Document upload feature
Friday 28 Feb	Verification process
Saturday 01 Mar	Convert candidate to employee

WEEK 6 SUMMARY:

In week 6, the onboarding process was developed to streamline the transition of selected candidates into employees. PDF generation for offer letters was implemented to provide official offers. A joining form was designed to collect initial joining details. An employee personal details form was created to store comprehensive employee information. A document upload feature was added for secure submission of supporting documents. A verification process was implemented to review and validate employee information. Finally, the functionality to convert a candidate into an employee was developed, completing the recruitment to onboarding flow.

Student's Signature: meenabhi verma Date: 01/03/2026

Comments by Industry Mentor:

- Employee and salary data were managed properly
- Holiday and Shift setup was done correctly

Name: Sachal Patel

Signature of Industry Mentor [Signature] Date: 01/03/2026

WEEKLY PROGRESS CHART

(WEEK 7)

(WEEK STARTING: 03/03/2026 | WEEK ENDING: 08/03/2026)

DAY	DESCRIPTION OF WORK DONE
Monday 03 Mar	Testing onboarding module
Tuesday 04 Mar	Holiday
Wednesday 05 Mar	Employee profile creation
Thursday 06 Mar	Salary structure setup
Friday 07 Mar	Shifts creation
Saturday 08 Mar	Holiday calendar module

WEEK 7 SUMMARY:

In week 7, the onboarding module was thoroughly tested to ensure smooth functionality and data accuracy. Employee profiles were created to maintain complete employee information in the system. The salary structure setup was completed to define pay components and rules. Shifts were created to manage work timings and rotations. Finally, the holiday calendar module was implemented to maintain organization holidays and ensure proper tracking.

Student's Signature: Meenakshi Verman Date: 08/03/2026

Comments by Industry Mentor:

- leave system was simple and easy to use
- Approval flow and records were maintained well

Name: Snehal Patel

Signature of Industry Mentor [Signature] Date: 8/03/2026

WEEKLY PROGRESS CHART

(WEEK 5)

(WEEK STARTING: 17/02/2026 | WEEK ENDING: 22/02/2026)

DAY	DESCRIPTION OF WORK DONE
Monday 17 Feb	• Candidate filtering (DataTables)
Tuesday 18 Feb	• Interview scheduling module
Wednesday 19 Feb	• Interview rounds setup
Thursday 20 Feb	• Panel & scoring system
Friday 21 Feb	• Offer creation module
Saturday 22 Feb	• Offer letter template design

WEEK 5 SUMMARY:

In week 5, the recruitment process was enhanced with advanced functionalities. Candidate filtering was implemented using DataTables to enable quick search and sorting. An interview scheduling module was created to manage interview dates and timings. Multiple interview rounds were set up to structure the hiring process. A panel and scoring system was developed to evaluate candidates effectively. The offer creation module was implemented to generate offers for selected candidates. Lastly, a professional offer letter template was designed for consistent and formal communication.

Student's Signature: Meenakshi Verma Date: 15/03/20

Comments by Industry Mentor:

- Payroll was calculated correctly based on
given data

- Payroll and basic statutory parts were handled
well

Name: Santhul Patel

Signature of Industry Mentor [Signature] Date: 15/03/2026

WEEKLY PROGRESS CHART

(WEEK 9)

(WEEK STARTING: 17/03/2026 | WEEK ENDING: 22/03/2026)

DAY	DESCRIPTION OF WORK DONE
Monday 17 Mar	• Attendance reports
Tuesday 18 Mar	• Leave types creation
Wednesday 19 Mar	• Leave balance logic
Thursday 20 Mar	• Leave apply feature
Friday 21 Mar	• Leave approval workflow
Saturday 22 Mar	• Leave ledger

WEEK 9 SUMMARY:

In week 9, the leave management module was developed to streamline employee leave processes. Attendance reports were implemented to provide detailed insights into employee attendance. Leave types were created to support different categories of leave such as casual, sick, earned, and unpaid leave.

Leave balance logic was developed to calculate and update available leave balances based on entitlements and usage. The leave apply feature was implemented to allow employees to submit leave requests with necessary details.

An approval workflow was implemented to route leave requests to the appropriate approvers and track their status. Finally, a leave ledger was developed to maintain a comprehensive history of leave transactions, providing transparency and accurate record-keeping.

Student's Signature: Meenakshi Date: 22/03/26

Comments by Industry Mentor:

- Deductions were added properly in the system

- Reports were complete and easy to understand

Name: Snehal Patel

Signature of Industry Mentor [Signature] Date: 22/03/2026

WEEKLY PROGRESS CHART

(WEEK 10)

(WEEK STARTING: 24/03/2026 | WEEK ENDING: 29/03/2026)

DAY	DESCRIPTION OF WORK DONE
Monday 24 Mar	Testing leave module
Tuesday 25 Mar	Payroll month setup
Wednesday 26 Mar	Salary calculation logic
Thursday 27 Mar	PF/ESIC/PT implementation
Friday 28 Mar	Payslip generation
Saturday 29 Mar	Payroll testing

WEEK 10 SUMMARY:

In week 10, the leave module was thoroughly tested to ensure all functionalities worked as expected and any issues were identified and resolved.

The payroll month setup was configured to define payroll periods, pay days, and related settings.

Salary calculation logic was developed to process employee salaries based on attendance, leaves, allowances, and deductions.

PF, ESIC, and Professional Tax (PT) were implemented as per statutory rules to ensure compliance.

Payslip generation was implemented to provide employees with a detailed salary breakdown.

Finally, overall payroll testing was conducted to validate accuracy, compliance, and system reliability.

Student's Signature: Meenakshi Verma Date: 29/03/20

Comments by Industry Mentor:

- full & final process was done correctly
- letter formats were neat and usable

Name: Sachin Patel

Signature of Industry Mentor [Signature] Date: 29/03/2026

WEEKLY PROGRESS CHART

(WEEK 8)

(WEEK STARTING: 10/03/2026 | WEEK ENDING: 15/03/2026)

DAY	DESCRIPTION OF WORK DONE
Monday 10 Mar	Employee CRUD testing
Tuesday 11 Mar	Attendance module design
Wednesday 12 Mar	Manual attendance entry
Thursday 13 Mar	Work hours calculation
Friday 14 Mar	Late/early tracking
Saturday 15 Mar	OT calculation

WEEK 8 SUMMARY:

In week 8, the employee management features were tested thoroughly to ensure data integrity and proper functionality. The attendance module was designed to capture and manage employee attendance records effectively. Manual attendance entry was implemented to allow administrators to add attendance data when required. Work hours calculation logic was developed to compute total working hours accurately. Late and early tracking was added to monitor punctuality and attendance compliance. Finally, overtime (OT) calculation was implemented to track extra hours worked beyond regular hours.

Student's Signature: Meenakshi Verma Date: 05/04/20

Comments by Industry Mentor:

- Properly understood learn / advance module
- Implemented EM2 calculation logic correctly.

Name: Sachin Patel

Signature of Industry Mentor [Signature] Date: 05/04/2020

WEEKLY PROGRESS CHART

(WEEK 12)

(WEEK STARTING: 07/04/2026 | WEEK ENDING: 12/04/2026)

DAY	DESCRIPTION OF WORK DONE
Monday 7 Apr	Testing reports
Tuesday 8 Apr	Fixing report bugs
Wednesday 9 Apr	Resignation module
Thursday 10 Apr	Approval workflow
Friday 11 Apr	Full & Final calculation
Saturday 12 Apr	Leave encashment

WEEK 12 SUMMARY:

In week 12, reports were thoroughly tested to ensure accuracy, completeness, and performance across different scenarios.

Issues identified during testing were analyzed and report-related bugs were fixed to improve reliability and correctness.

The resignation module was developed to manage employee exit processes and maintain resignation records.

An approval workflow was implemented to route resignation requests to the appropriate approvers for validation.

Full & Final calculation was developed to compute final settlements, including salary, deductions, loans, and other components.

Leave encashment functionality was implemented to calculate and process encashment of eligible leave balances as per company policies.

Student's Signature: Meenabhi Verma Date: 12/04/26

Comments by Industry Mentor:

- Implemented leave encashment functionality with
- Develop Resignation Module correctly

Name: Snehal Patel

Signature of Industry Mentor [Signature] Date: 12/04/2026

WEEKLY PROGRESS CHART

(WEEK 11)

(WEEK STARTING: 31/03/2026 | WEEK ENDING: 05/04/2026)

DAY	DESCRIPTION OF WORK DONE
Monday 31 Mar	Payroll debugging
Tuesday 1 Apr	Loan/advance module
Wednesday 2 Apr	EMI calculation
Thursday 3 Apr	Other deductions
Friday 4 Apr	Reports generation
Saturday 5 Apr	Export reports (Excel/PDF)

WEEK 11 SUMMARY:

In week 11, payroll issues identified during testing were debugged and resolved to improve accuracy and system stability.

The loan/advance module was developed to manage employee loans and advances, including disbursement and repayment tracking.

EMI calculation logic was implemented to automatically compute installment amounts based on loan terms.

Other deductions such as recovery, miscellaneous deductions, and custom deductions were implemented as per business rules.

Reports generation was enhanced to provide various payroll, attendance, leave, and loan-related reports for better insights.

Finally, report export functionality was implemented to allow exporting reports in Excel and PDF formats for sharing and record-keeping.

Student's Signature: Meenakshi Verma Date: 19/04/26

Comments by Industry Mentor:

- To enhance data integrity and prevent unauthorized action, security improvements were made correctly and easy to use.

Name: Snehal Patel

Signature of Industry Mentor [Signature] Date: 19/04/2026

WEEKLY PROGRESS CHART

(WEEK 13)

(WEEK STARTING: 14/04/2026 | WEEK ENDING: 19/04/2026)

DAY	DESCRIPTION OF WORK DONE
Monday 14 Apr	Recovery & deductions
Tuesday 15 Apr	F&F testing
Wednesday 16 Apr	Letter templates
Thursday 17 Apr	Appointment letter
Friday 18 Apr	Confirmation letter
Saturday 19 Apr	Security improvements (validation)

WEEK 13 SUMMARY:

In week 13, recovery and deduction features were implemented to handle employee recoveries and additional statutory or custom deductions.

Full & Final (F&F) calculations were thoroughly tested to ensure accurate settlement of dues for exiting employees.

Letter templates were created to standardize employee communication and maintain consistency across the system.

Appointment letter and confirmation letter generation features were implemented to automate the creation of official documents.

Security improvements were made by adding validations for inputs, business rules, and access controls to enhance data integrity and prevent unauthorized actions.

Student's Signature: Meenakshi Verma Date: 22/04/26

Comments by Industry Mentor:

- Final project was submitted with proper documentation

- Overall, she has done a very good job throughout the internship

2. Internship Related information:

Criterion	Remarks
Constraints	Limited Time, Limited Real data Complex payroll rules
Understanding of the Issue	Manual HR work causes errors and takes time. A single system is needed to manage all task
Likely Problems / Research Limitations in the proposed Internship	Payroll calculation difficulty leave balance handling

3. Internship Area Selected:

Title of the Internship area Identified	FULL STACK , HRMS
Aim:	To build a system that automates HR WORK
Objective(s): (Min 3)	Manage employee data Process Payroll
Methodology:	Study requirements Design System and database Develop modules.
Are the environmental and societal implications arising out of the proposed internship?	YES / NO 

4. Internship Objective Feasibility and Supervisor`s Consent (To be completed by the Institute Mentor)

Points	Details for verification	Yes / No
Objective of the internship Identified	Is Objective of internship, found to be appropriate, relevant and finalized after supervisor`s consent?	
B. Tech. level challenge	Does the Internship Proposal submitted have adequate and achievable challenge levels of B.Tech ?	
Facilities, software and infrastructure	Are equipment / facilities required for doing this Internship available at institute / industry? If not, are alternate arrangements possible?	
Time lines	Will one Semester be adequate for achieving all the objectives mentioned in the proposal?	

Name and Signature of the Institute Mentor with Date:

4. INTERNSHIP EVALUATION AND MARKING RUBRICS

Annexure-01

(i) INTERNAL EVALUATIONS (50 marks each periodic evaluations-Total 150 MARKS)
Student Internship Periodic Assessments- 50 marks each time (to be followed for all three Evaluations)-to be filled by Internal Examiner (Institute wise)

Marking Rubrics	Technical Competence and Problem-Solving	Professionalism, Communication, and Teamwork	Learning and Adaptability
Excellent (75-100%)	Demonstrates exceptional technical skills and applies them effectively to solve complex problems with minimal guidance. Shows innovation and a strong grasp of engineering concepts.	Exemplary professionalism, punctuality, and work ethics. Communicates clearly and collaborates effectively in a team environment. Actively contributes to team success.	Learns new skills quickly, adapts seamlessly to challenges, and implements feedback effectively
Good (50-75%)	Sufficient technical understanding but struggles with more complex tasks. Needs regular assistance.	Consistently professional and dependable. Communicates well and works collaboratively, with occasional minor lapses.	Good adaptability and willingness to learn. Applies feedback with moderate effectiveness.
Need Improvement (0-50%)	Basic technical skills with limited problem-solving ability. Requires significant supervision to complete tasks.	Generally professional but occasionally inconsistent in communication or teamwork. Contributes to team efforts but may require reminders	Slow but steady in learning and adapting. Needs repeated feedback for improvement.
Out of	/20	/20	/10
Marks Obtained
